

Archive One *for Domino*

Control your data before it controls you

Archive One for Domino:

- ▶ Solves capacity problems created by the volume of messages and size of attachments being circulated by users
- ▶ Ensures copies of all mail and calendar items copied from the journal are stored safely for compliance retention
- ▶ Provides search and retrieval for users and eDiscovery for administrators and compliance officers
- ▶ Offers enhanced retention management by ensuring data is deleted or removed when required
- ▶ Reduces back-up windows by removing large amounts of data from the .nsf files and thereby improving system performance and enhancing the user perspective of their solution

With both the number of messages and the size of each message growing at an alarming pace, organizations are eager to find solutions - aside from setting mailbox quotas - that can alleviate the messaging system's burden on storage while also maintaining performance and productivity

Archive One for Domino helps organizations control their storage costs and relieves administration headaches and ensures that business-critical information is always safely protected and instantly retrievable.

Archive One for Domino provides much more than just email archiving. It offers fully automated data management to aid capacity, compliance, eDiscovery and retention management of emails from the moment they are received by the Domino server until the time they are no longer needed.

Solves capacity problems

Archive One provides a totally intuitive, familiar interface that incorporates all the advanced features for effectively working with data from Lotus Notes and Lotus Domino. Archive One does not affect users because the data management processes run automatically in the background.

Stores copies of all mail and calendar items

Archive One works without operator or user intervention. It links directly into the Domino server journals. As items reach the journal, Archive One creates an archive copy and when it is certain the data is safely committed to the archive, it removes the data from the journal.

Secure archives can be stored onto existing storage or onto dedicated devices, such as WORM drives, to meet specific regulations. They can also be managed through third party storage applications.

Search and retrieval

Archive One indexes all items during the capture process. This increases search speeds and efficiency for finding data. Data can be searched for and retrieved by users, administrators or compliance officers according to permissions, either from within the product or through one of the latest search solutions such as Google Enterprise Server or Microsoft Search Server 2008.

Retention management

Archive One provides for Information Retention Management allowing organizations to meet regulatory obligations. Features such as legal hold, tagging and the ability to set and change retention periods are available to improve eDiscovery management and to ensure data is deleted at its due date.

Reduces back-up windows

Archive One reduces the storage demands on primary storage, by offloading data to a secondary storage device. This reduces the backup/restore times on the main messaging servers.

Availability

Archive One supports Lotus Domino Messaging Server, Lotus Domino Enterprise Server, Lotus Domino Express Release V7.x and V8.x and Domino on any supported operating system and is available through C2C accredited resellers worldwide.

About C2C

C2C offers automated data archiving and management for email, files and SharePoint content, optimizing performance, reducing storage management costs and minimizing risks associated with critical data - helping you to control your data before it controls you.

C2C and accredited resellers also offer:

- ▶ Professional Services from expert consultants with detailed experience implementing C2C solutions
- ▶ Training to give you full control over the operation, maintenance and evolution of your system
- ▶ Technical Support so you always have someone to talk to who understands your requirements

C2C is a privately held company established in 1992 with offices in Springfield & Westborough, MA, US and Reading, UK and an accredited reseller network that extends throughout the world.
